

**Keyfort™**

# NEWSLETTER

Dear ,

Welcome to the January edition of the Keyfort monthly newsletter. This month's edition features:

1. Continuous Data protection from Keyfort...
2. Information on the most up-to-date secure remote access solution that we offer.
3. IT health checks.
4. Monthly Operations Report—Gateway Anti-Virus.

Kind Regards,

Sarah

## CONTINUOUS DATA PROTECTION FROM KEYFORT...

### THE CHALLENGE:

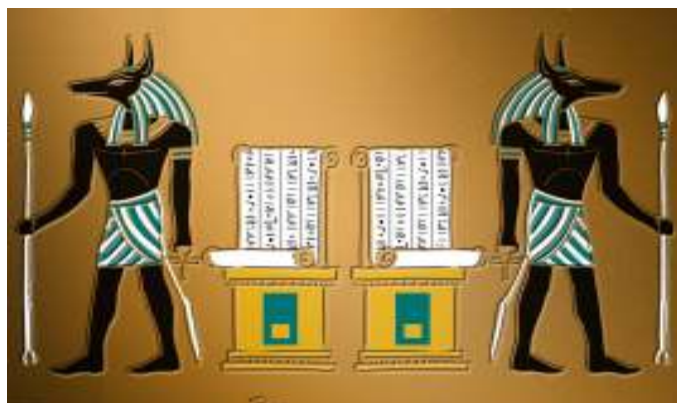

With increasing numbers of home and remote workers, organizations are looking for solutions that enable all business-critical data and information to be automatically backed up and stored to a central system. Businesses are increasingly vulnerable to lost revenue and productivity when business systems and data become unavailable, therefore reducing the impact of local network failures or unforeseen events is vital.

### THE SOLUTION:

A Continuous Data Protection solution from Keyfort which offers complete backup and recovery, with automatic disk-based back up and recovery for multiple workstations and servers regardless of their geographical location. With flexible disaster recovery options, Keyfort's Continuous Data Protection (CDP) Series offers the only end-to-end backup and recovery solution designed to meet the complete needs of businesses and local governments with a distributed workforce.

As backup occurs users are able to continue with their tasks without experiencing any disruption. The solution can be seamlessly integrated existing environments, and can be extended for use across multiple platforms. Users can also relocate previous versions of saved documents, or save the content of the CDP solution onto their own hard-drive.

Administrators can easily pre-configure set policies to ensure specific business-critical files, folders or applications are backed up, and can assign end-users rights to allow them to retrieve their own data. Remote management also enables administrators to log in to the appliance from any location to manage policies, settings and view statistics. The CDP solution also ensures reliability and speed of recovery by automatically generating e-mail alerts on any compromised connectivity, as well as regularly scheduled reports on backup activity.

## A Complete Secure Access Solution from Keyfort

Keyfort's secure remote access solution enables secure access to designated network resources for a broad array of users, including mobile workers, remote offices, contractors, and business partners. It offers outstanding performance and protection for users and organisations utilising remote access, using SSL technology. The solution has a comprehensive approach to remote access by utilising a "detect, protect and connect" strategy, ensuring that only authorised users and permitted devices can gain access to confidential corporate information.

Firstly, the technology detects the identity and security state of the PC used to gain remote access at the end point prior to two factor authentication of the user. Two-factor authentication assures security surrounding remote access log-ins and corporate network access. It's a security process in which the user provides two means of identification, one of which is typically a physical token, such as a card, and the other of which is typically something memorized, such as a security code. Only when both of these factors are present, is access to the network granted.

Secondly, the solution protects resources with granular policies based on the individual user and end point; users can be segregated into groups set by administrators which govern access for all users and devices.

Keyfort's remote access solution conforms to the Code of Connection (CoCo) standards, as required by local governments and organisations wishing to connect to the GSi/Government Connect Secure Extranet.

### **BENEFITS OF KEYFORT'S SECURE ACCESS SOLUTION:**

- Increases productivity by providing easy access to multiple applications from more environments than any other secure access solution.
- Lowers IT overhead and total cost of ownership.
- Easy-to-use from any endpoint.
- Complies with the Government Connect Secure Extranet Code of Connection (CoCo) requirements.
- Works with laptops, PDAs, smartphones, home PCs and public kiosks.
- Meets IT health check requirements.
- A complete remote access solution, which is secure, is a simple addition to the network and is cost effective.

---

## IT HEALTH CHECKS...

As a part of Keyfort's service, we are now offering IT Health Checks for organizational networks. In essence, an IT health check is similar to having an MOT for your car, it simply checks that each part of your network is working as it should (such as maintaining its security). Our IT health check provides a complete, fully documented, audit of your network, and gives recommendations for improving the efficiency and safety of your network. It also complies fully to the governments Code of Connection (CoCo) standards.

## MONTHLY OPERATIONS REPORT

This month at Keyfort, we have seen an increase in the number of clients buying our Gateway Anti-Virus solution. This solution acts as a barrier to the network perimeter, preventing viruses, Trojans and malicious spyware from entering the network at all. Its dynamically updated signature database provides continued protection from the most devastating threats. Gateway Anti-Virus solution works in conjunction with desktop anti-virus programmes and your existing firewall, providing all-round threat protection.
